Email: pwolf@cloudbees.com

Audience

Jenkins World
A global DevOps event
2017

- New Jenkins Users
- New Jenkins Admins

Schedule

Jenkins World
A global DevOps event
2017

08:30 - 09:15 - Jenkins Overview

09:15 - 10:00 - Installation and Configuration

10:00 - 10:30 - Q&A and Break

10:30 - 12:00 - Running Jobs and Pipeline

12:00 - 12:30 - Q&A

Jenkins World

A global DevOps event

2017

What is Jenkins?

Takeaways

Jenkins World
A global DevOps event
2017

- Understand Terminology
- Understand Big Picture
- Know Where to Get Help

Meet Jenkins

Jenkins World
A global DevOps event
2017

Jenkins is an open source automation server which enables developers around the world to reliably build, test, and deploy their software.

Why Do Continuous Integration

Jenkins World
A global DevOps event
2017

Continuous Integration doesn't get rid of bugs, but it does make them dramatically easier to find and remove.

— Martin Fowler

What is Continuous Delivery?

Jenkins World
A global DevOps event
2017

- Each change to the system **can** be released for **production**
- Delivery can be done at **any** time, on **any** environment

Meet Kohsuke

Jenkins World
A global DevOps event
2017

History

Jenkins World
A global DevOps event
2017

- #1 Continuous Integration and Delivery server
- Created by Kohsuke Kawaguchi in 2006
- Original project: "Hudson", renamed "Jenkins" in 2011
- An independent and active community
- 500+ releases to date
- 150,000+ active installations
- 300,000+ Jenkins servers
- 1,200+ plugins

Hudson

Terminology

Jenkins World
A global DevOps event
2017

Agent Node Build
Master Run Executor Freestyle
Slave
Queue
Workspace Job
Remoting Pipeline

Terminology

Jenkins World
A global DevOps event
2017

- Master - Jenkins Master
- Agent (Slave) - A Remote Node with Slave.jar installed
- Executor - A unique process
- Node - Any machine that can have an executor
- Workspace - A directory on a Node for doing work
- Job - A definition of a particular process
- Build/Run - A specific instance of a Job
- Queue - All Builds waiting for an Executor

Installation

Takeaways

Jenkins World
A global DevOps event
2017

- What is Long Term Stable (LTS)?
- Where to get latest?
- Security Updates

Minimum Requirements

Jenkins World
A global DevOps event
2017

- Jenkins runs on:
 - Unix/BSD
 - Linux
 - Mac OS
 - Windows
- Java required:
 - 7 is the minimum version.
 - 8 recommended.

Installation Options

<https://jenkins.io/download/>

- Direct Azure
- Google Cloud
- Amazon AWS
- Docker
- WAR

Deploy Jenkins 2.60.3

Download Jenkins 2.60.3 for:

Docker
FreeBSD
Gentoo 
Mac OS X
OpenBSD 
openSUSE
Red Hat/Fedora/CentOS
Ubuntu/Debian
Windows
Generic Java package (.war)

Commercial Options

Jenkins World
A global DevOps event
2017

- CloudBees Jenkins Team
 - <https://www.cloudbees.com/products/cloudbees-jenkins-team>
- CloudBees Jenkins Enterprise
 - <https://www.cloudbees.com/products/cloudbees-jenkins-enterprise>

Long Term Stable

Jenkins World
A global DevOps event
2017

<https://jenkins.io/download/lts/>

- Weekly Builds
- Quarterly LTS
- 3 LTS releases

Installing Agents

Jenkins World
A global DevOps event
2017

- SSH Agents
 - SSH Slaves Plugin
 - Poor Window Support
- JNLP Agents
 - JNLP4 Recommended
- Plugins
 - Swarm Agent
 - Docker Plugin
 - Kubernetes Plugin
 - Mesos Plugin
 - EC2 Plugin
 - Azure Plugin

Demo Installation

Configuring & Managing Jenkins

Takeaways

Jenkins World
A global DevOps event
2017

- What are primary areas to configure
- How to setup Users
- How to setup Tools
- How to install Plugins
- How to setup Credentials

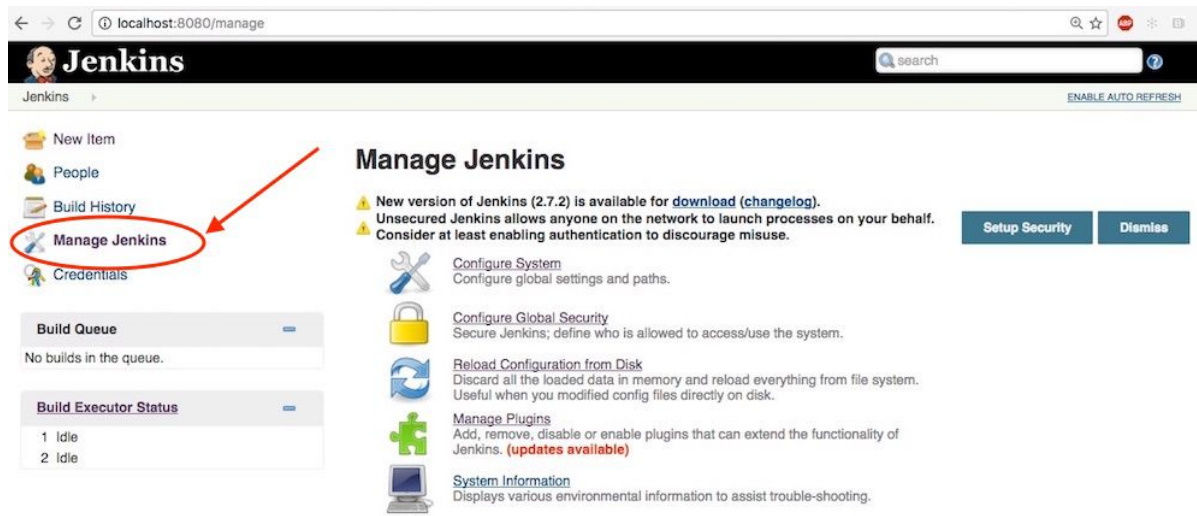

Managing Jenkins

Jenkins World
A global DevOps event
2017

- Manage Jenkins page link in the left-menu
- Only visible by allowed users (administrator)
- Direct link: `http://<jenkins-address>/manage`

The screenshot shows the Jenkins web interface at the URL `localhost:8080/manage`. The left-hand navigation menu contains links for 'New Item', 'People', 'Build History', 'Manage Jenkins' (which is circled in red and pointed to by a red arrow), and 'Credentials'. Below these links are sections for 'Build Queue' (showing 'No builds in the queue.') and 'Build Executor Status' (showing two idle executors). The main content area is titled 'Manage Jenkins' and displays several warning messages and configuration options: 'New version of Jenkins (2.7.2) is available for download (changelog).', 'Unsecured Jenkins allows anyone on the network to launch processes on your behalf. Consider at least enabling authentication to discourage misuse.', 'Configure System', 'Configure Global Security', 'Reload Configuration from Disk', 'Manage Plugins', and 'System Information'. There are also buttons for 'Setup Security' and 'Dismiss'.

Nodes

Jenkins World
A global DevOps event
2017

- Monitoring
- Labels
- Limiting

Users

Jenkins World
A global DevOps event
2017

- Authentication
 - LDAP
 - Active Directory
 - GitHub OAuth
- Authorization
 - Role Strategy
 - Matrix Auth
 - CloudBees RBAC plugin

Tools

Jenkins World
A global DevOps event
2017

- Tools options (from Configure System):
- Tools configurations:
 - Depends on plugins installed
 - Tools locations (JDKs, Mavens, etc.)
 - Tools configuration (by default) for tools like SSHD, SCMs
- Automatic Installation
- Configure multiple versions

Plugins

Jenkins World
A global DevOps event
2017

<https://plugins.jenkins.io>

- A plugin is in format .hpi
- This is a JAR format with some special conventions (e.g. no web.xml)
- Maven knows how to handle the hpi format
 - Some plugin may be found using jpi
 - Plugins are versioned artifacts:
You can upgrade and downgrade
 - They may have dependencies (mandatory or optional)
 - Plugins are located in `${JENKINS_HOME}/plugins`
 - Both hpi files and un-archived versions

Credentials

Jenkins World
A global DevOps event

2017

- Connect Jenkins to the World
- Open to Developers
- Configure at Folder Level

Problems with Freestyle Jobs

Jenkins World
A global DevOps event
2017

While the Freestyle job type has served the Hudson/Jenkins community well for years it has some major issues including:

- **UI Bound** - The configuration of a job is limited to what can be expressed via the limits of the Jenkins' UI and doesn't allow for building complicated workflows with features like:
 - Control over where builds are executed
 - Flow control (if-then-else, when, try-catch-finally)
 - Ability to run steps in parallel
- **Not Auditable** - The creation and editing of jobs isn't auditable without using additional plugins

Pipeline as Code - Jenkinsfile

Jenkins World
A global DevOps event
2017

- Auditable
- Portable
- Durable
- Extensible
- DRY
- Automatic

"We are absolutely loving Jenkinsfiles and Github Organization Folders. It has revolutionized how we use Jenkins"

Fewer Snowflakes

Jenkins World
A global DevOps event

2017

- Consistency
- Reuse
- Focus on Application

Include all Stakeholders

Getting Started

Create your first Pipeline

To get started quickly with Pipeline:

1. Copy one of the [examples](#) below into your repository and name it `Jenkinsfile`
2. Click the **New Item** menu within Jenkins

3. Provide a name for your new item (e.g., **My Pipeline**) and select **Multibranch Pipeline**
4. Click the **Add Source** button, choose the type of repository you want to use and fill in the details.
5. Click the **Save** button and watch your first Pipeline run!

Table of Contents
Create your first Pipeline
Quick Start Examples
Java
Node.js / JavaScript
Ruby
Python
PHP

You may need to modify one of the example `Jenkinsfile`'s to make it run with your project. Try modifying the `sh` command to run the same command you would run on your local machine.

After you have setup your Pipeline, Jenkins will automatically detect any new Branches or Pull Requests that are created in your repository and start running Pipelines for them.

[Continue to "Run multiple steps"](#)

Quick Start Examples

Below are some easily copied and pasted examples of a simple Pipeline with various languages.

Java

```
Jenkinsfile (Declarative Pipeline)
pipeline {
  agent { docker 'maven:3.3.3' }
  stages {
    stage('build') {
      steps {
        sh 'mvn --version'
      }
    }
  }
}
```
